Public Engagement Session

Shubie Canal Bridge Replacement

Welcome to Halifax Water's Public Engagement Session

Agenda

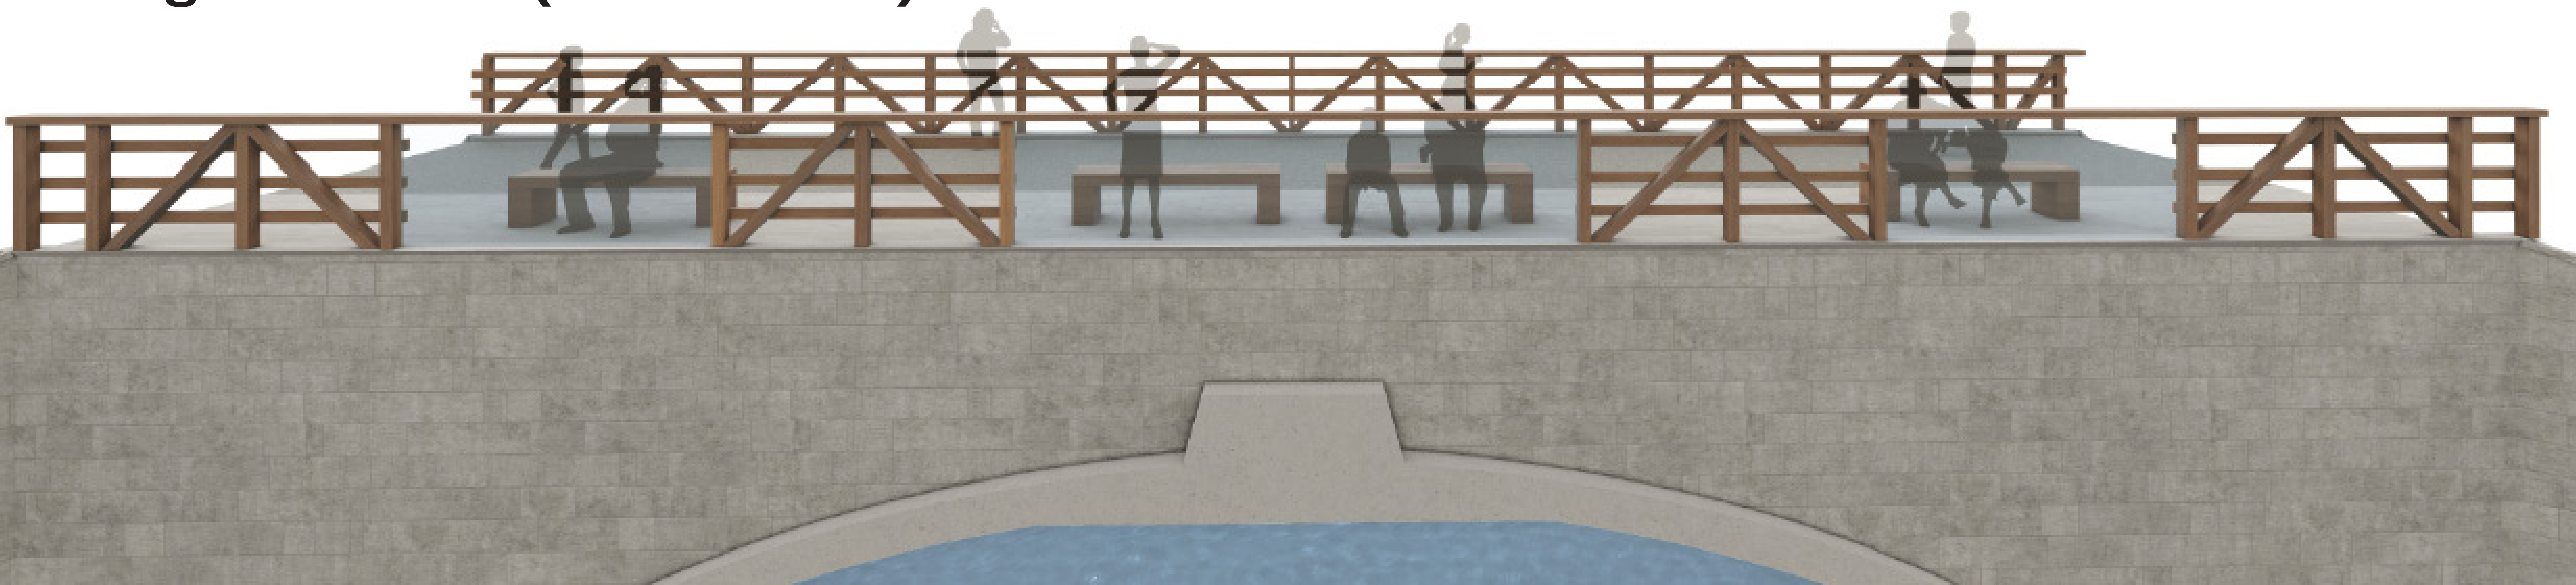

- **Purpose**
- **Location**
- **Design**
- **Project Timing**

Purpose

The bridge crossing Shubie Canal nearby Shubie Beach, is an important piece of public infrastructure, providing active transportation connections which allow residents and park users to readily access park amenities, and local destinations such as shopping and employment.

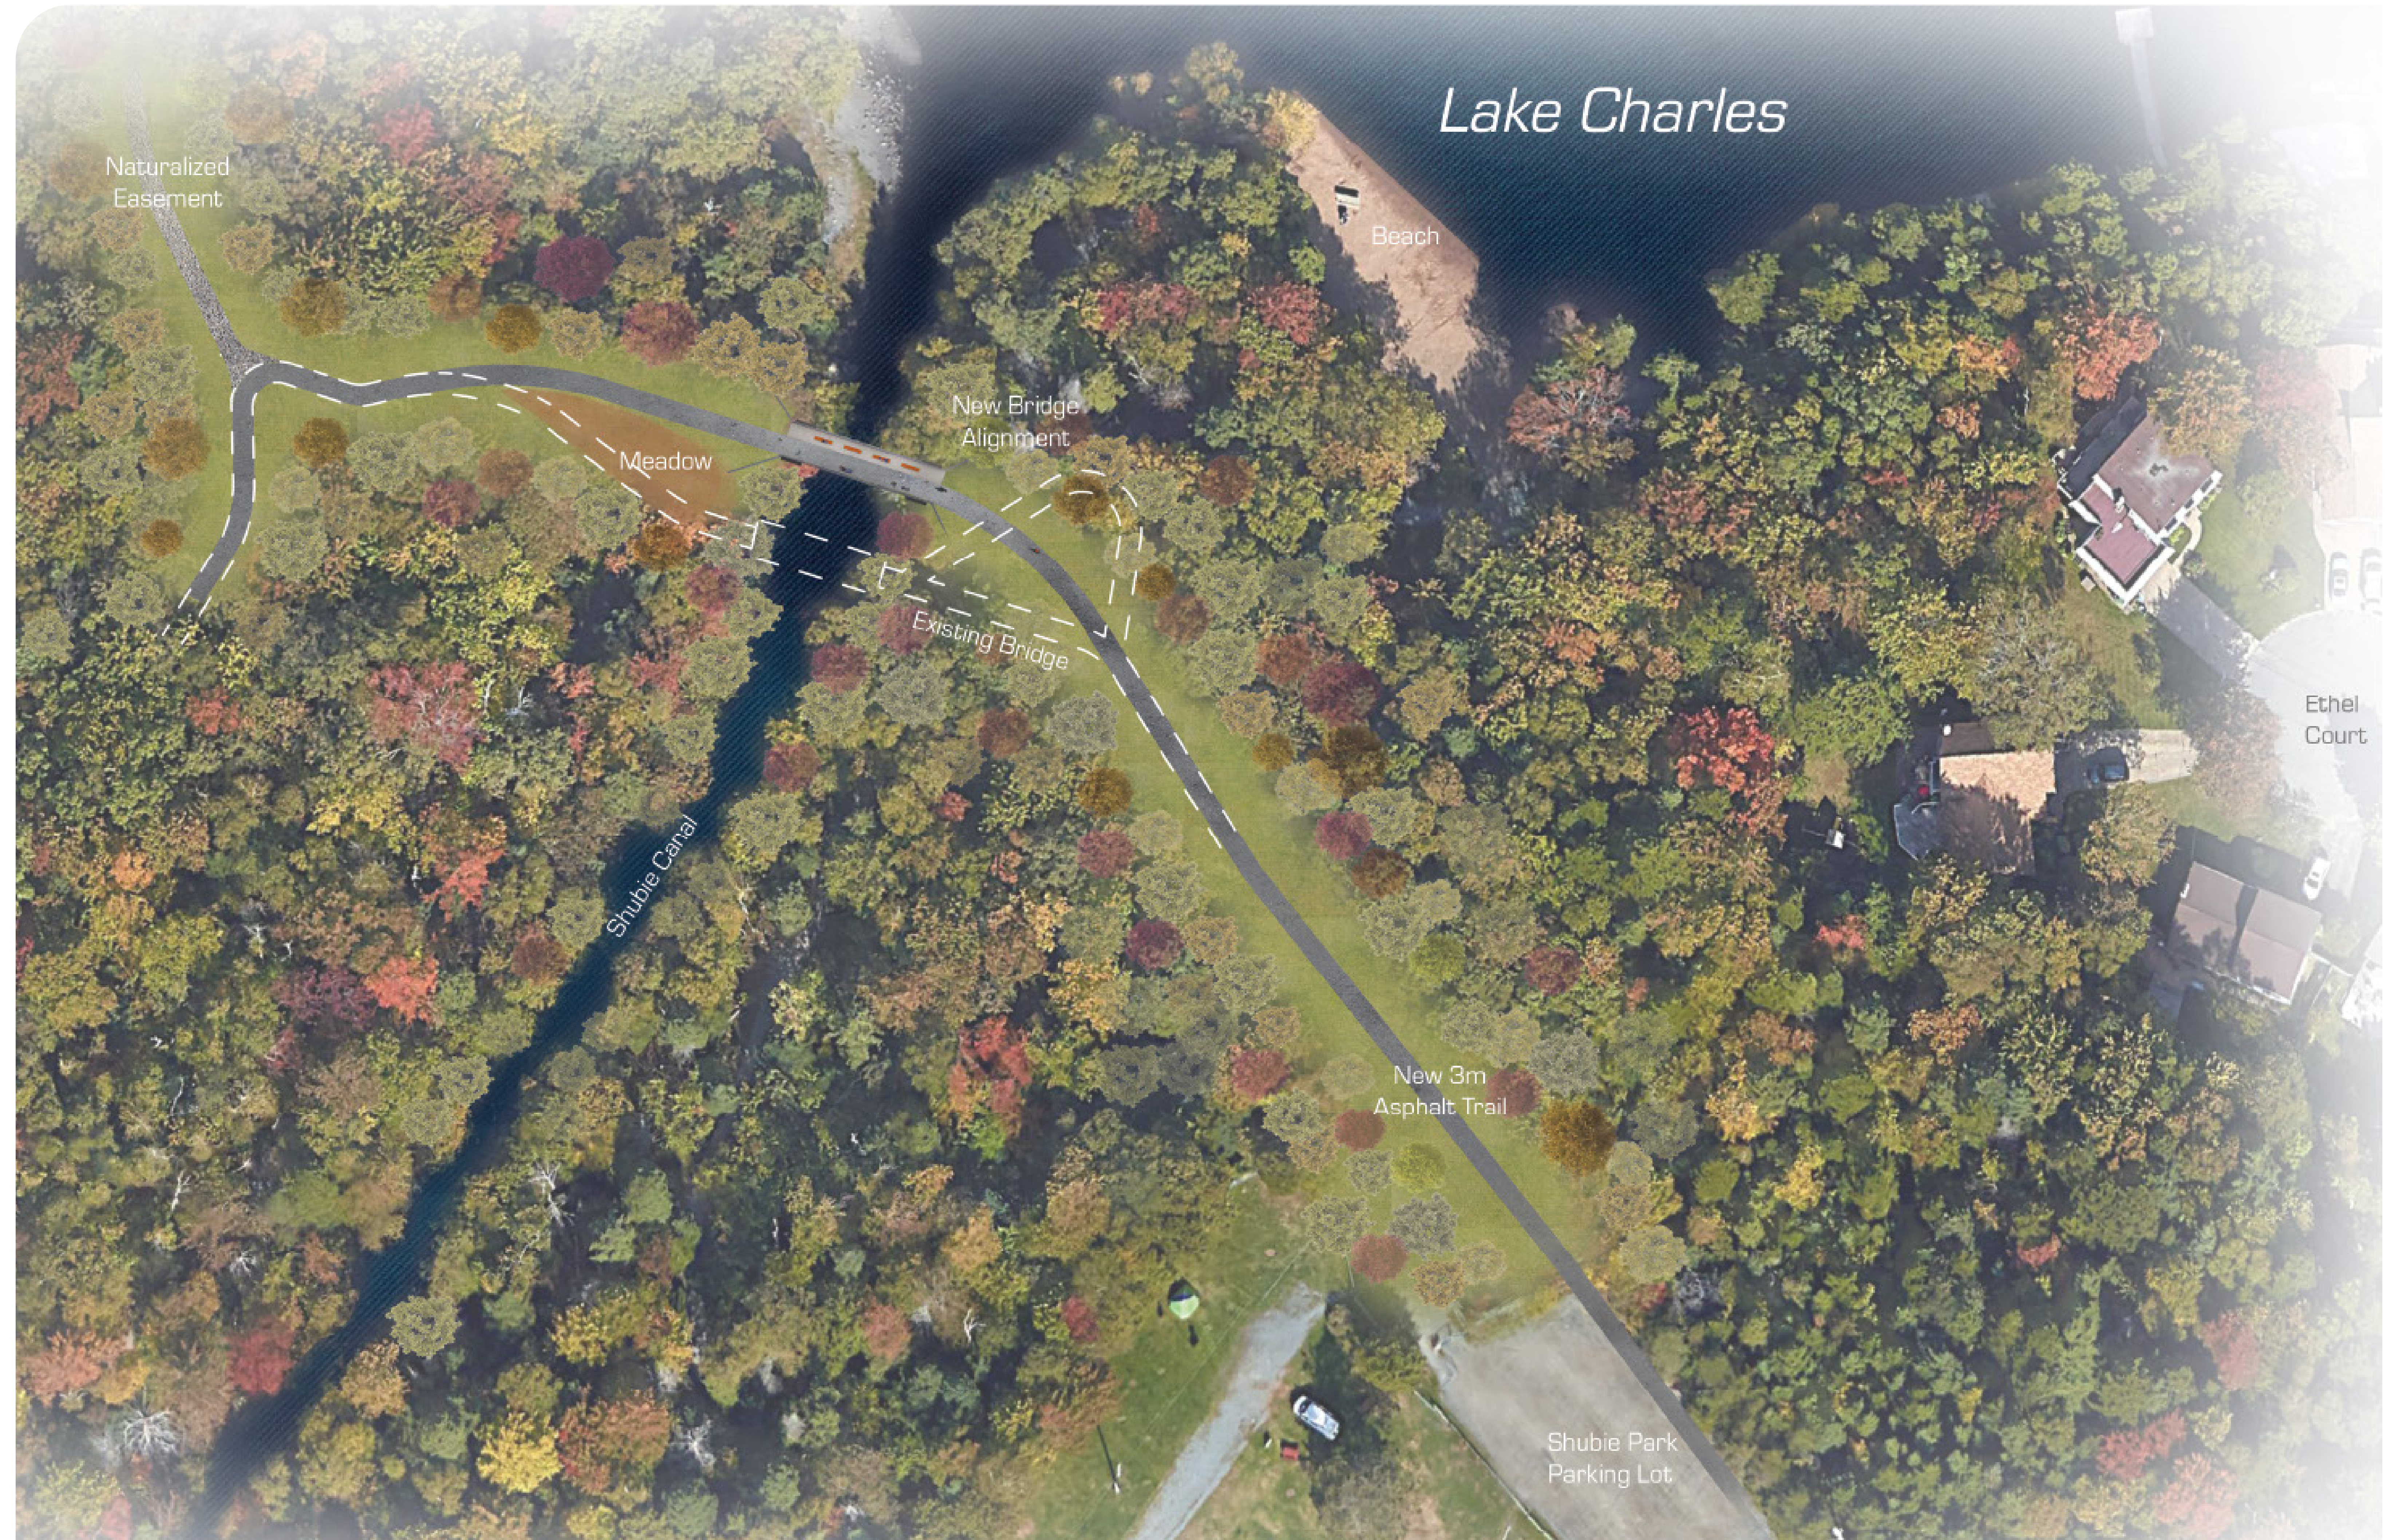

The existing bridge is in need of replacement, and the new bridge will provide an upgraded design and will facilitate required water distribution system resiliency, a wastewater collection connection and a natural gas system expansion to support the existing community and growth areas (Port Wallace).

Location

The new bridge will be located slightly north of the existing pedestrian bridge.

This location allows the installation to result in minimal disruption to the site.

Design

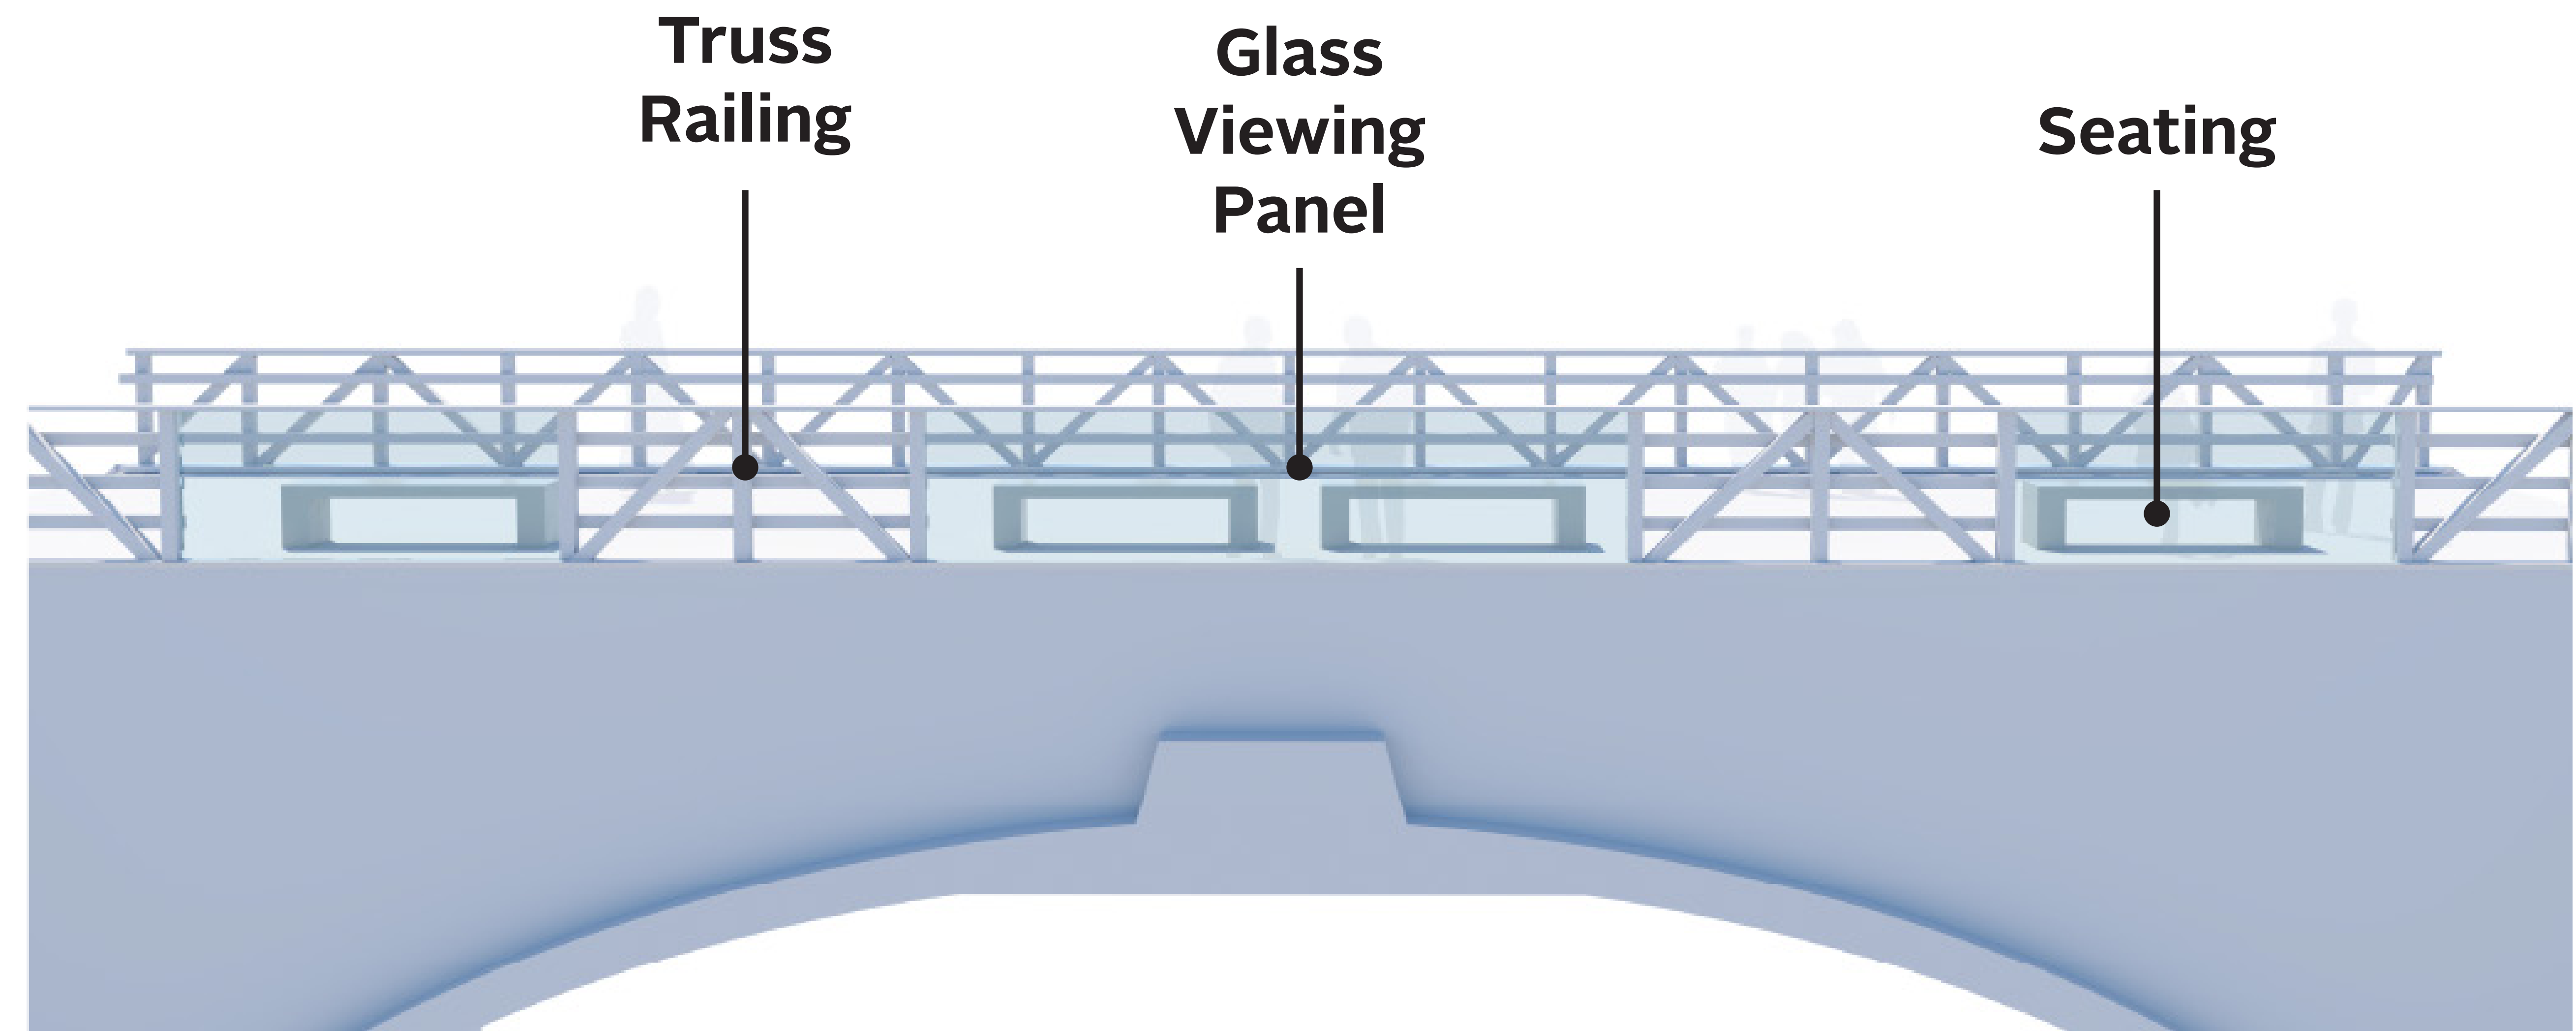

The bridge is an open-arch design that continues to facilitate active-use of the canal and is of sufficient height to permit stand-up paddle boarding.

Design

The bridge materials and form are designed to complement the surrounding environment, with natural materials that reflect a rustic aesthetic of the forested area, familiar to park users.

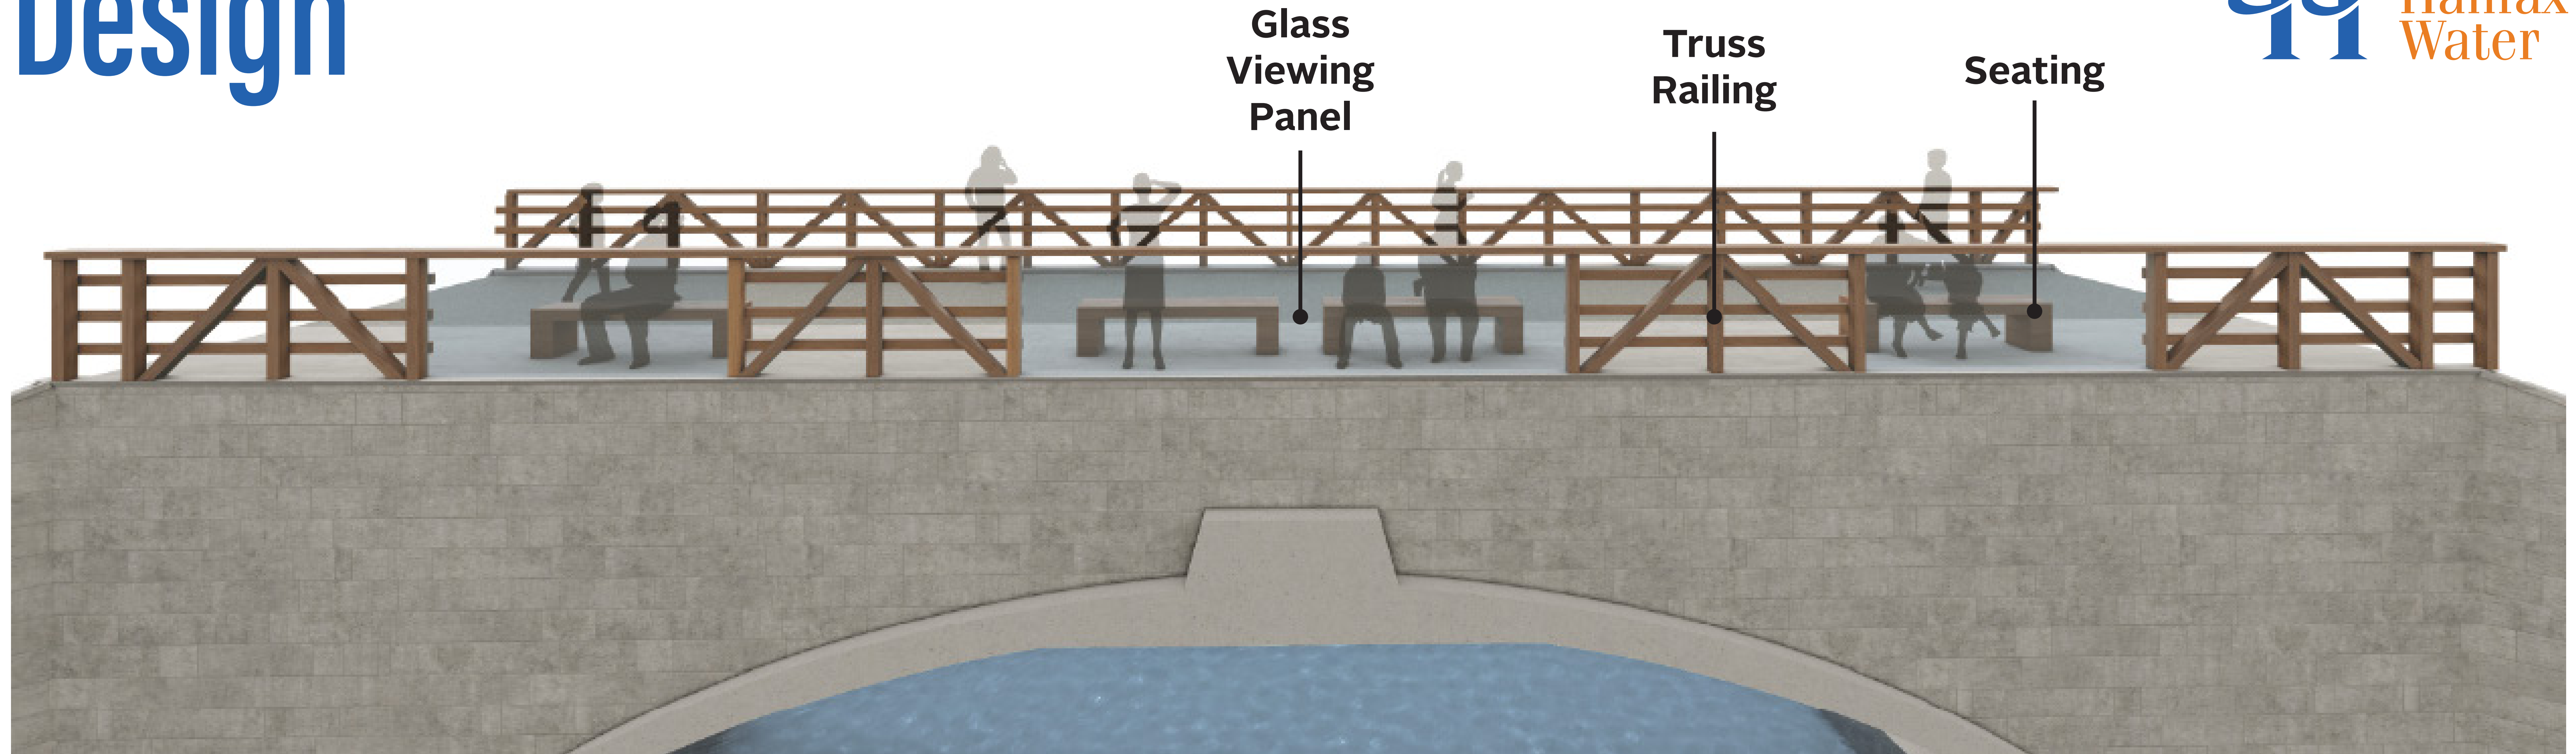

The design also includes inset glass viewing panels to allow unobstructed views from the seating areas.
