

Active Transportation on Bayers Road/Westmount Community

Active Transportation (AT) Connectivity

- Routes approved by Regional Council as part of Integrated Mobility Plan (2017)
- Multi-use pathway on Bayers Rd will allow for safer, more comfortable connection to the Chain of Lakes trail for recreational and active commuting purposes
- Proposed local street bikeway route on Liverpool, Peter Lowe, and George Dauphinee is an important east-west connection to protected cycling infrastructure towards downtown
- Regional connection – part of the NS Blue Route (cycling), the Great Trail (pending) and the Rum Runners trail that will take you to Lunenburg and beyond on an off-road multi-use pathway
- Primary connection between the Halifax peninsula and surrounding mainland communities e.g. Fairview, Armdale, Spryfield, Bayers Lake, Beechville, Lakeside, Timberlea

Complete Streets Approach

Infrastructure is designed with all road users in mind, including people who walk, wheel, drive, cycle, and take public transit. A 'Complete Street' is a street that addresses the needs and safety of all road users. For Bayers Road, this involves dedicating space to other types of road users in the form of dedicated transit priority lanes and multi-use pathways for walking and cycling.

All Ages and Abilities (AAA)

HRM's focus is on providing active transportation facilities that are comfortable and safe for users of all ages and abilities, from 8 to 80. This includes kids, seniors, people with limited mobility, those who have never bicycled, as well as those who bicycle every day.

Mode Shift for Sustainability and Healthy Communities

Providing a range of viable transportation options will us help shift away from our reliance on personal automobiles and help the Municipality meet its goals of sustainability and healthy built communities. The target is to have at least 30% of trips completed by walking, cycling, and transit by 2031.
