

# Transit Priority on Gottingen Street

## What Will Change?

### Existing Conditions - Off-Peak

- There are two traffic lanes, with left turn lanes located at some intersections.
- Parking and loading are permitted intermittently on both the northbound and southbound sides of the street.

### Proposed Conditions - Off-Peak

(Weekdays before 7AM, 9AM - 3PM, after 6PM; all-day on weekends)

- The northbound curb lane will be designated for on-street parking and loading. Parking and loading will be more efficiently allocated in the northbound lane, resulting in additional space for these uses relative to current conditions.
- Parking and loading will be prohibited in the southbound curb lane at all times.

### Proposed Conditions - Peak Periods

(Weekdays 7-9AM, 3-6PM)

- The northbound curb lane will be dedicated to buses. There will be three active traffic lanes.
- Parking and loading will be prohibited in the southbound curb lane at all times. Parking enforcement will be critical to keep the bus lane free.
