

# Grahams Grove Active Transportation Functional Plan

## DRAFT CONCEPTS PUBLIC ENGAGEMENT

### WELCOME

The draft design concepts for new active transportation infrastructure are ready, and we want to hear your feedback to help create a safe, accessible and connected active transportation network in Grahams Grove.

### PROJECT OVERVIEW

The Grahams Grove project aims to create safe, connected, healthy, sustainable and enjoyable active transportation options for all ages and abilities, throughout the Grahams Grove, Penhorn, Westphal and Main areas. The project focuses on pedestrian and cycling infrastructure along several key streets identified in the Integrated Mobility Plan and Active Transportation Priorities Plan.

**This project will make the following links to create a connected network in the area:**

- 1 Prince Albert Road to Harris Road
- 2 Grahams Grove to Braemar Drive
- 3 Braemar Drive to Lakecrest Drive
- 4 Tacoma Drive to Lakecrest Drive
- 5 Main Street Overpass above Highway 111
- 6 Harris Road to Oakwood Avenue
- 7 Micmac Boulevard to Lake Banook Trail
- 8 Tacoma Drive to Valleyfield Road

### PROJECT TIMELINE

### WHAT IS ACTIVE TRANSPORTATION?

Active transportation (AT) is about providing comfortable spaces for people to bike, walk or roll. Promoting active transportation involves both infrastructure and programs. Good active transportation networks make it easier to travel around the city without a car, which can improve access within a community or to regional shops and services, as well as many other benefits.

Active transportation infrastructure usually refers to sidewalks, bike lanes, multi-use pathways, trails and local street bikeways. AT is enhanced when it includes complete street elements such as seating, signage, green space, or public art. The infrastructure on a street shapes how it's used.

# Grahams Grove Active Transportation Functional Plan

## DRAFT CONCEPTS PUBLIC ENGAGEMENT

### SHARE YOUR THOUGHTS

Help us refine the proposed street-level changes & new active transportation infrastructure for Grahams Grove, Penhorn, Westphal and Main. Tell us what you like, what you would change and what we've missed. This feedback will inform the final designs.

#### SOME QUESTIONS TO CONSIDER:

- what do you like about the concepts?
- what stands out to you about these concepts?
- what would you like to change?
- what is missing?
- what are your priorities?
- how does this make you feel if you picture yourself using this new infrastructure?
- is this helpful for you? Would you enjoy using it?
- would you feel safe and comfortable using this infrastructure to walk, roll or bike?
- if these conceptual designs were built, how would this change or affect your everyday life?

#### WAYS TO CONTRIBUTE:

Show your level of support for each design with a **vote**.

Tell us what you like or don't like about a design by placing a **sticky note** on the board.

More to say? Other ideas? Write them down on a **comment card**.

Kids are welcome to participate in all ways. We want to hear from you. We also have fun **activity sheets**.

**Have questions?**  
Staff are here to answer them.

#### ONLINE FEEDBACK:

Learn more at our Shape Your City webpage. Take the online survey or share it with a friend or neighbour.

1

# Prince Albert Road to Harris Road

## PROPOSED CONNECTION 1

### Proposed Interventions

- improved crossing of Grahams Grove via existing signalized intersection at Kiwanis Park and Superstore driveway
- on-street bikelanes on Prince Albert Road
- local street bikeway on Harris Road

The aim of this intervention is to create a safe and efficient active transportation route between 2 existing multi-use paths.

Share your thoughts on a sticky and park it here:

## EXISTING CONDITIONS

### Prince Albert Road

There are currently no designated cycling facilities, some hazards for cyclists and pedestrians and is frequently congested.

### Harris Road

Is a wide, low traffic route with no designated cycling facilities.

## PROPOSED DESIGNS

### Prince Albert Road Cross-Section 1

On-street bikelanes are proposed. The aim is to improve separation between cars and bicycles as traffic is often fast-moving.

### Harris Road Cross-Section 2

Local street bikeways are proposed. Traffic calming measures and designated paths for cyclists aim to improve safety.

# 2

# Grahams Grove to Braemar Drive

## PROPOSED CONNECTION 2

### Proposed Interventions:

- protected multi-use path connecting Grahams Grove to Braemar Drive

The aim of this intervention is to create a safe connection for cyclists and pedestrians to use over Highway 111.

Share your thoughts on a sticky and park it here:

## EXISTING CONDITIONS

### Braemar Overpass

There are no designated cycling facilities on Grahams Grove, cyclists must dismount and use the sidewalk in this high traffic area. The pedestrian sidewalk is narrow and not protected by a barrier.

## PROPOSED DESIGN OPTIONS

### Braemar Overpass Cross-Section 1

The addition of an independent bridge structure for cyclists and pedestrians would ensure safe crossing from Grahams Grove to Braemar Drive. This option retains the existing conditions of the overpass for vehicle traffic and the adjoining sidewalk.

### Braemar Overpass Cross-Section 2

A protected multi-use path would create space for cyclists and pedestrians to move safely across the Braemar overpass separately from cars. Accommodating space for this would result in narrower lanes and lower speed limits for vehicle traffic.

# 3

# Braemar Drive to Lakecrest Drive

## PROPOSED CONNECTION 3

### Proposed Interventions

- Braemar Drive to Lakecrest Drive via local street bikeways on Maple Drive, Raymond Street, and Plymouth Road, between Maple Drive and Raymond Street
- Lakecrest Drive to Braemar Drive via protected multi-use path on Route 7 slip road

The aim of these interventions is to create safe options for cyclists to traverse across the residential neighbourhoods of Westphal.

Share your thoughts on a sticky and park it here:

## EXISTING CONDITIONS

### Route 7 Slip Lane to Braemar Drive

There are no cycling facilities along the fast-moving slip lane. Cyclists must dismount and walk.

### Raymond Street & Maple Drive

There are currently no cycling facilities or traffic calming measures on these residential streets.

## PROPOSED DESIGNS

### Route 7 Slip Lane to Braemar Drive Cross-Section 1

A new multi-use path above the existing retaining wall would give cyclists an opportunity to safely travel from Lakecrest to Braemar.

### Raymond Street & Maple Drive Cross-Section 2

A local street bikeway with traffic calming measures would improve cyclist's safety and may encourage use.
