KEY DIRECTIONS:

Replace the existing Pavilion building with two new spaces:

- multi-purpose room for general community use in the aquatic area building
- second storey of the Citadel Community Centre developed for community use that would include a youth-focused arts space.

Undertake a feasibility study and community engagement process to create a youth-focused arts space and associated programming, including music, performance, and visual arts.

PROPOSED COMMUNITY SPACE AT THE POOL PAVILION

LEGEND:

1. UNIVERSAL WASHROOM
2. COMMUNITY SPACE
3. STAFF SPACE
4. CIRCULATION

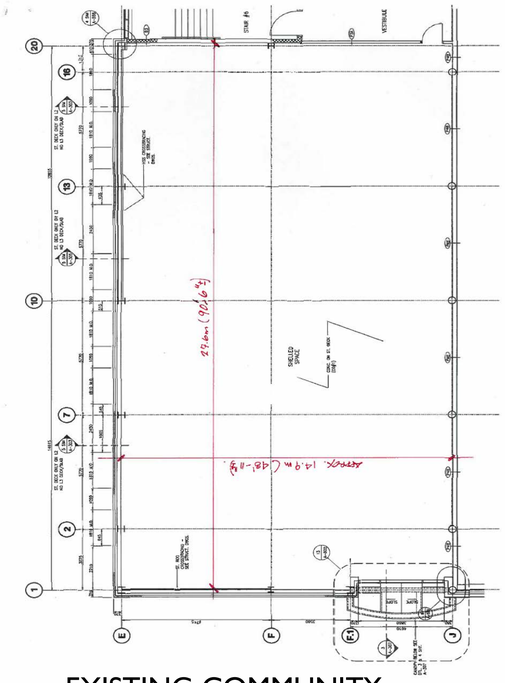

The Pavilion building has been central to the local all-ages music community over the past two decades. At the same time, it has served as space for municipal recreation programs, change rooms for the pool, and a support facility during sport events. However, the building has many issues and replacement spaces that will meet these needs are required.

The Aquatic Area Community Room will provide year-round space for a wide range of groups and purposes, including summer camps, community gatherings, and event support. It will be a highly flexible space, but will not have the spatial capacity to meaningfully enable arts programming.

It is appropriate to locate a youth-focused arts space at the Citadel Community Centre from a number of perspectives:

- The engagement process revealed a strong desire to maintain a youth-focused arts space on The Common.
- Municipal policy sets a goal for incorporating culture in recreation facilities and programs
- It is within the original intent of the Citadel Community Centre as a space for community needs
- The Citadel Community Centre second floor is currently underutilized, and provides over 4000 square feet of unfinished exposed space

The Master Plan recommends undertaking a feasibility study and community engagement process to create a flexible, youth-focused arts space and associated programs, including music, performance, and visual arts. The study would gather input on the design features, functional requirements, operational framework and costs, including installation of an elevator.
